
Aurixis Information Security Program

Version 1.0 | September 14, 2026 | Aurixis

Purpose

This document describes the information security program maintained by Aurixis to protect seller-authorized marketplace data, order data, customer data, invoice data, integration tokens, and operational systems.

Scope

The program applies to production systems, administrative access, marketplace integrations, APIs, webhooks, support routines, and data handled by the Aurixis OMS/WMS platform.

Controls

Aurixis maintains restricted administrative access, secure credential handling, least privilege principles, operational monitoring, HTTPS/TLS traffic, incident response, vulnerability review, and periodic review of access to production resources.

Operational Baseline

Team members with administrative responsibilities are expected to use strong passwords, screen lock, endpoint protection, secure handling of credentials, clean desk practices, and multi-factor authentication where supported by the service provider.
